PROFESSIONAL SUMMARY

Data Engineer with 3 years of production experience designing, building, and owning scalable data pipelines for high-volume financial data, from architecture through delivery. Deep hands-on expertise in Apache Airflow orchestration — the same DAG-based principles underlying GCP-native orchestration — and Apache Spark, backed by strong SQL and Python foundations, containerized infrastructure (Docker, Kubernetes), and CI/CD pipelines (Jenkins, GitLab CI). Led a YARN-to-Kubernetes infrastructure migration and redesigned a core IFRS reporting table into a partitioned, governance-compliant architecture in a highly regulated environment. Comfortable owning a pipeline end-to-end and working independently; hands-on with GCP (BigQuery, Dataproc, Cloud Storage) through an end-to-end personal project, and new to Dataform and Datastream.

WORK EXPERIENCE

Middle Data Engineer 2 — ***Bank of Georgia*** *2026 – Present*

- Architect and own production ETL pipelines (Apache Spark, Apache Airflow, Python) end-to-end, from design through delivery, processing high-volume financial data under strict data integrity and compliance requirements.
- Migrated core financial pipelines from Hive and HDFS to an Iceberg lakehouse on a Polaris catalog with MinIO object storage, validated end-to-end on pre-production with zero disruption to daily financial close.
- Replaced a hardcoded IFRS balance-generation module with a config-driven, data-defined transformation architecture, centralizing business-logic changes into a single configuration layer.
- Own a custom Airflow framework — dynamic DAG generation driven by PostgreSQL-based configuration, custom operators/sensors, cross-DAG dependency resolution, mutex-based concurrency control.
- Migrated pipeline orchestration from YARN to Kubernetes and completed an Airflow 2→3 upgrade, replacing legacy Vault-based secrets management with injected environment variables.

Middle Data Engineer 1 — ***Bank of Georgia*** *2025 – 2026*

- Built ETL infrastructure from scratch for sovereign/yield-curve data ingestion, including custom error handling for pipeline failure visibility.
- Enforced data quality and governance standards across downstream reporting systems in a regulated, compliance-driven environment.
- Built incremental-load infrastructure — dynamic partition overwrite, initial-load mode, SCD2/CDC patterns — migrating provisioning and credit card datasets from PostgreSQL to a Delta Lake data warehouse.

Junior Analyst Developer — ***Bank of Georgia*** *2024 – 2025*

- Performed data quality validation and business impact analysis across core financial datasets, identifying and resolving discrepancies ahead of downstream reporting.
- Built foundational expertise in the Spark and Airflow ETL ecosystem, transitioning into distributed data processing.

PL/SQL Developer Intern — ***Bank of Georgia*** *2023 – 2024*

- Redesigned a core IFRS reporting table — replacing a flat legacy structure with a partitioned, subpartitioned architecture in compliance with financial governance standards, materially improving query performance and data manageability.
- Developed and maintained Oracle PL/SQL functions and packages governing critical financial data in production.
- Supported ETL development and database optimization across core banking systems.

Math Tutor — ***Self-employed*** *2022 – 2023*

- Provided one-on-one tutoring in mathematics, developing clear communication and structured problem-solving skills.

PROJECTS

GCP Batch Data Pipeline (independent project)

- Built an incremental batch pipeline on GCP (Cloud Storage → Spark on Dataproc → BigQuery), orchestrated with Airflow and provisioned with Terraform, with data quality checks on ~31M synthetic records.

AWS Infrastructure Automation (independent project)

- Built a Python/boto3 CLI tool with argparse subcommands for RDS storage scaling, DynamoDB table inventory, and automated manual snapshot creation.

TECHNICAL SKILLS

Languages & Query: Python · SQL (advanced) · PL/SQL (Oracle) · Node.js

Orchestration & Big Data: Apache Airflow · Apache Spark · Apache Hive · Hadoop · Databricks · Delta Lake · Iceberg · Polaris · MinIO

Cloud: GCP (BigQuery, Dataproc, Cloud Storage) · AWS (S3, EC2, RDS, DynamoDB, boto3)

Infrastructure & IaC: Docker · Kubernetes · YARN · Terraform

CI/CD & DevOps: Jenkins · GitLab CI · CI/CD Pipelines

Databases: Oracle · PostgreSQL · MongoDB

Version Control: Git · GitHub · GitLab

EDUCATION

Business and Technology University · MA – Information Systems, DevOps — *2025 – Present*
100% State Scholarship for master's degree studies

International School of Economics, Tbilisi State University · BA — *2021 – 2025*
GPA: 3.65 / 4.0 · 100% State Scholarship for bachelor's degree studies

Komarovi School · Secondary Education — *2015 – 2021*

COURSES & CERTIFICATES

Risks Academy · TBC Academy (TBC Bank)	*Dec 2023 – Mar 2024*
Machine Learning Specialization · DeepLearning.AI	*Sep 2024*
CS50's Introduction to Programming with Python · Harvard University / CS50	*Sep 2023*
AI For Everyone · DeepLearning.AI	*Apr 2024*
Claude Code in Action · Anthropic	*Apr 2026*
Introduction to Agent Skills · Anthropic	*Apr 2026*
Introduction to Subagents · Anthropic	*Apr 2026*
Claude 101 · Anthropic	*Apr 2026*
Claude with Amazon Bedrock · Anthropic	*Jun 2026*
The Complete Node.js Developer Course (3rd Edition) · Udemy	*Apr 2026*
Databricks Data Engineering (Associate exam preparation) · Udemy	*May 2026*
